

# Gratings

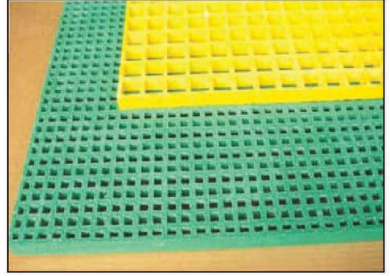

## PRODUCT DESCRIPTION

To create superior, adaptable, non slip and durable surfaces the Grating Company use only the finest materials available.

Mini-Mesh grating has holes that are just 13mm square easily passing new European guidelines.

The grating is 30mm thick and because of the close bearing bars, this grating has superior strength.

Available from stock in 2m x 1m sheets in green.

12mm grating is now in stock in 3.66m x 1.22m sheets.

This type of grating has a 50mm mesh pattern instead of the usual 38mm and is ideal for use as machine guards etc.

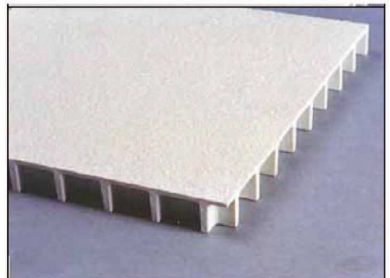

If you plan to put your grating directly onto the floor then you should consider using this low-cost 25mm grating.

It is manufactured using the same high quality resin as the rest of the range. Ramps can also be manufactured to create a seamless non-trip walking area.

All types of gratings are now available with a solid laminated surface. The laminate is 3mm thick and is gritted for maximum anti-slip properties resulting in a high strength, lightweight composite flooring panel.
